Monobond™

The difference is in the edge.

A seamless, adhesive-free edge banding technology designed for cleaner, stronger, longer-lasting furniture.

Traditional edges can yellow, collect dirt, and break down over time. Monobond is engineered to stay cleaner, stronger, and looking better longer.

Marco is proud to be one of the only education furniture manufacturers currently offering Monobond joint edge banding technology. This advanced, adhesive-free finish creates a smooth, seamless bond between the edge and surface for a cleaner look and longer-lasting performance.

Seamless. Durable. Built for schools.

MARCO Environments for Learning

Compare the Edge	MonoBond™	Other Edge Options*
Material	ABS edgebanding	PVC or other banding; spray-applied coatings
Appearance	Smooth, integrated finish with no visible glue line	Glue lines, texture and profile vary by product
Application	Advanced edgebanding technology	Adhesive-applied banding or directly applied coating
Cleanability	Smooth, gap-free surface for easy wipe-down	Depends on surface texture and joint construction

*General comparison of edge types. Materials and performance vary by manufacturer. Sealed and moisture-resistant edges are available in multiple categories.
